Rating: ★★★★★★★★★★

Top Of Its Class

Superior build quality. Nice Crayford rotatable focuser. Tight and crisp star images. Very little false color.

A vary enjoyable and rewarding widefield experiance!

Thank you William Optics!!!

Rating: ★★★★★★★★★★

Awesome performer

A very well built and nice performing little telescope. Mine seems to be perfectly collimated with pinpoint star images. Double stars are a treat.

Focuser and sliding dewshield are buttery smooth. I get great high power views up to and past 160x despite being mostly a wide field, low power scope.

There is a tiny fringe of color around the lunar rim, and Saturn looks great at high powers with Cassini's Division seen. No color here. Open star clusters like M41 & the Pleadies are amazing. Overall, a great performer and very portable. I've had the SV Nighthawk and much prefer this one.

Great Price-Performer!!

This is an easy 10. The scope is very well buit, looks great, and performs better than any other short focal length achro I've tried. All that for \$400 is a steal in my book.
