## FLT 110 Flouro-Star Super APO Reviews

**Product:** FLT 110 Flouro-Star Super APO

**From:** Charlie Tan

**Date:** Monday 02 June, 2003

### Review:

Well, i think i'm the first person to get the FLT locally, and i've been invited by McGill to write a review on it, so here it goes (forgive my amateuristic review):

Equipment: FLT110 on Vixen GPD mount  
 Condition: Avg. Seeing conditions  
 Location: In City area, most of time beside a highway.

Optics: Sharp contrast to the edge. Clusters appear sharp and well-defined, Seems like taking a space-walk when coupled with TV 15mm Panaoptics. Viewing planets is a leisure, with visual details defined and beautifully framed with no bluish hue or whatsoever! Doing a optics test on Vega, diffraction rings are defined and well seperated. And manages to split cleanly Double Double at Lyra with 100x magnification.

Mechanics: It's pure beauty and precision at its best! 'nuff said!

Weight: Abit bulky and heavy for those w/o personal transportation, esp. when you're having a GPD mount to go with it!

Problematic areas: The focuser will be a tad stiff when you used it for some time, but by loosening the focuser mechanism and tweak it to your like, it's smooth as butter again. The free finderscope-holder has a problem of stuck screws due to contraction-expansion, mine's spoilt, 2 out of the 3 is stuck in their threadholes but still managable. Look like William Optics needs to fix that problem.

Conclusion: An affordable Apo-refractor that has defined a class out of it's own. If you have the budget, why settle for less when you can get this and enjoy your gazing nights even better?

**Rating:** ★★★★★ [5 of 5 Stars!]
